

(20), each support bracket (20) being coupled to said skateboard by a plurality of bolts (15), said skateboard comprising:

an elongated body (10) formed by a top plate (11), a bottom plate (12) and a pair of closed side plates (13) disposed on opposing sides of said body (10), each of said pair of closed side plates (13) being formed between said top plate (11) and said bottom plate (12);

a support base (100) formed on a mediate portion of said top plate (11);

a pair of strengthened frames (141) formed between said top plate (11) and said bottom plate (12) and each extending longitudinally within said elongated body (10) adjacent a respective opposing side of said support base (100), the plurality of bolts (15) coupling the support brackets (20) being passed through said strengthened frames (141); and,

a pair of reinforcing ribs (14) formed between said top plate (11) and said bottom plate (12) and each extending longitudinally within said elongated body (10) in a portion thereof between a respective one of said pair of strengthened frames (141) and a respective one of said pair of closed side plates, said elongated body (10), said pair of reinforcing ribs

MR929-505

(14) and said pair of strengthened frames (141) are integrally formed in one piece of a single moldable material.
